

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application. Claims 1-48 are presented as follows:

1. (Currently Amended). A stamping apparatus comprising:
a roller, the roller including a surface defined by a stamp; and
a receiver portion for receiving the roller in a rotatable engagement, the receiver portion including oppositely disposed ends, each of the oppositely disposed ends configured for weighting the roller.
2. (Originally Presented). The apparatus of claim 1, wherein the stamp includes a pattern.
3. (Originally Presented). The apparatus of claim 1, wherein the apparatus includes a texture.
4. (Originally Presented). The apparatus of claim 1, wherein the stamp includes a pattern and a texture.
5. (Cancelled).
6. (Currently Amended). The apparatus of claim 5 1, wherein the receiver portion includes: a cross bar extending at least substantially in the direction defined by a longitudinal axis extending through the roller, the cross bar including a first end and a second end defining the oppositely disposed ends of the receiver portion, and oppositely disposed lateral members; and a cross bar,

each of the lateral members in communication with an end of the cross bar, the lateral members
configured for receiving the roller in a rotational engagement.

7. (Currently Amended). The apparatus of claim 6, wherein the cross bar includes the at least
one holder a plurality of holders for holding removable weights, at least one holder at the first
end of the cross bar and at least one holder at the second end of the cross bar.

8. (Cancelled).

9. (Originally Presented). The apparatus of claim 1, additionally comprising: a handle in
communication with the receiver portion.

10. (Originally Presented). The apparatus of claim 1, wherein the stamp includes a layer of
material.

11. (Originally Presented). The apparatus of claim 10, wherein the material includes urethane
rubber.

12. (Currently Amended). A stamping apparatus comprising:
a roller, the roller including oppositely disposed ends and a surface defined by a stamp; and
a receiver portion for receiving the roller in a rotatable engagement, the receiver portion and
including, a first end and a second end, and at least one holder for holding removable weights at

each of the first and second ends, for weighting the roller at least at one of the oppositely disposed ends.

13. (Originally Presented). The apparatus of claim 12, wherein the stamp includes a pattern.

14. (Originally Presented). The apparatus of claim 12, wherein the apparatus includes a texture.

15. (Originally Presented). The apparatus of claim 12, wherein the stamp includes a pattern and a texture.

16. (Currently Amended). The apparatus of claim 12, wherein the receiver portion includes: oppositely disposed lateral members; and a cross bar, in communication with intermediate each of the oppositely disposed lateral members, each of the lateral members and at least a portion of the cross bar defining the first and second ends of the receiver portion, the lateral members configured for receiving the oppositely disposed ends of the roller.

17. (Currently Amended). The apparatus of claim 16, wherein the cross bar includes the holders at least one holder for holding removable weights.

18. (Cancelled).

19. (Originally Presented). The apparatus of claim 12, additionally comprising: a handle in communication with the receiver portion.

20. (Originally Presented). The apparatus of claim 12, wherein the stamp includes a layer of material.

21. (Originally Presented). The apparatus of claim 20, wherein the material includes urethane rubber.

22. (Currently Amended). A stamping apparatus comprising:

a roller, the roller including a surface of at least one layer including a stamp therein; and
a receiver portion for receiving the roller in a rotatable engagement, the receiver portion and
including, a first end and a second, and at least one holder for holding removable weights at each
of the first and second ends, for weighting the roller at the oppositely disposed ends.

23. (Originally Presented). The apparatus of claim 22, wherein the stamp includes a pattern.

24. (Originally Presented). The apparatus of claim 22, wherein the apparatus includes a texture.

25. (Originally Presented). The apparatus of claim 22, wherein the stamp includes a pattern and a texture.

26. (Currently Amended). The apparatus of claim 22, wherein the receiver portion includes:
oppositely disposed lateral members; and a cross bar, in communication with intermediate each
of the oppositely disposed lateral members, each of the lateral members and at least a portion of

the cross bar defining the respective first and second ends of the receiver portion, the lateral members configured for receiving the oppositely disposed ends of the roller.

27. (Currently Amended). The apparatus of claim 26, wherein the cross bar includes the holders at least one holder for holding removable weights.

28. (Cancelled).

29. (Originally Presented). The apparatus of claim 22, additionally comprising: a handle in communication with the receiver portion.

30. (Originally Presented). The apparatus of claim 22, wherein the at least one layer includes one layer of urethane rubber.

31. (Currently Amended). A method for stamping concrete comprising:
providing a stamping apparatus comprising:
a roller, the roller including a surface defined by a stamp; and
a receiver portion for receiving the roller in a rotatable engagement, the receiver portion including oppositely disposed ends configured for receiving weight for weighting the roller;

adjusting the weight on weighting to the receiver portion including, weighting at least one of the oppositely disposed ends of the receiver portion, in accordance with the tightness of the concrete being worked; and

moving the apparatus over the concrete being worked for stamping the concrete in accordance with the stamp.

32. (Currently Amended). The method of claim 31, wherein the weighting the receiver portion includes adding weight to at least one of the oppositely disposed ends of the receiver portion.

33. (Currently Amended). The method of claim 31, wherein the weighting the receiver portion includes removing weight from at least one of the oppositely disposed ends of the receiver portion.

34. (Originally Presented). The method of claim 31, wherein the weighting the receiver portion includes not removing weight and not adding weight to the receiver portion.

35. – 48. (Cancelled).
